

ALBINS GEARSETS

OEM Replacement gears and shafts for your:

Nissan R35 GTR

Honda B & K-Type

Subaru WRX 1994-Current

Mitsubishi EVO 3-EVO X

Porsche 911

VW Transaxle

Albins manufactures a large range of gearsets to suit various applications. Many of these sets are manufactured using Albins gear profile grinding technique which delivers a perfect tooth profile after heat treatment. Increased reliability, reduced noise and reduced gear pitting are distinct advantages when fitting Albins kits manufactured via gear profile grinding.

Isotropic finishing is available as standard on R35 GTR gearsets and available as an option on other products. Anti-fatigue shot peening treatment is standard on all Albins products.

Albins gearsets are manufactured using steel from our on-site steel store that is stocked with our own proprietary grade of steel.

Contact us for more information on the popular products listed above or email us for information on some of our gearsets that are not listed on our mainstream product list (minimum order volumes required)
